Summary of Codebase Documentation

An analysis of the documentation within the Employee Recognition System codebase reveals two primary README files. The main README file, located at the root of the project, consists of 55 lines and 1710 characters. In contrast, the frontend-specific README file contains 70 lines and 3359 characters, indicating a more detailed explanation of the frontend components. These documentation files provide essential information for developers and contributors, outlining the project's structure, functionality, and guidelines for implementation. Further review of these files can offer valuable insights into the system's architecture and best practices for employee recognition system development.
